NEW PRODUCT RELEASE

Small Syringe Pump for Limited Space Applications

The **KD Scientific Model KDS 310 Nano Pump** is used exclusively with micro syringes from 0.5 to 250 microliters.

Small size, remote control and a rugged mounting arm make it ideal for use with micromanipulators, stereotaxic frames and other clamping devices.

The controller can be 6 feet away from the pumping unit which is useful for safely pumping into reaction vessels, pumping radioactive chemicals or for mounting in small places next to an experiment.

The single syringe infusion/withdrawal pump consists of a controller and a remote pump head designed to use microliter syringes and deliver nanoliter volumes at low flow rates.

The microprocessor based controller uses a bright display and membrane keypad with a simple, menu-prompt system for easy setup. The pump features preset rate and volume control. The dispense volume is displayed continuously and the pump shuts off automatically when the preset volume has been reached.

KD Scientific designs, manufactures and sells a range of quality fluidics equipment used by research laboratory markets worldwide.
